### Comments from Cooperative Extension Service Parish Agents

“Drying conditions toward the end of the week allowed fieldwork to progress. Growers worked to quickly complete hay baling, ryegrass planting, and crop harvesting before the next round of showers. Fall vegetables made good progress. Satsuma harvest was in full swing. Pecan prices and yields remains low and quality is fair. Sugarcane growers continued to report good tonnage as they applied ripener to improve sugar yields.”

– Stuart Gauthier, Saint Martin Parish

“Rains continued to hamper the ability of producers to bale hay and finish planting sugarcane. Sugarcane harvest progressed nicely with respectful tonnage and recoverable sugar values.”

– Blair Herbert, Iberia Parish

“Rice ratoon crop continue to mature as the remainder of soybean crop including late maturing soybeans were being left in the field due to quality. Hay producers struggled to harvest hay between rains.”

– Todd Fontenot, Evangeline Parish

“Continued October rains made harvesting the last portion of the cotton and soybeans difficult. The final 6-10 % of these two crops are deteriorating in the field.”

– Richard Letlow, Morehouse Parish

“Field conditions improved with great weather later in the week which presented a much better harvest situation for the sugarcane growers. Soybeans not harvested were being destroyed and some land preparation began for spring planting. A few acres of wheat were planted by livestock producers who are planting winter pastures. An abundance of hay was cut with favorable weather for curing.”

– Vincent Deshotel, Saint Landry Parish
